DETAILED ACTION

Allowable Subject Matter

Claims 1-41 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest an optical system having a microdisplay and a magnifier for producing a magnified image of the microdisplay for viewing by a human eye, the magnifier having a long conjugate side in the direction of the human eye, a short conjugate side in the direction of the microdisplay, and, in order from the long conjugate side to the short conjugate side, has a first element with a first surface which is convex in the direction of the long conjugate, the first element having a focal length greater than zero; a block of optical material; and a second element with a second surface which is convex in the direction of the short conjugate, the second element also having a focal length greater than zero; where the magnifier has a diffractive surface which is closer to the magnifier's long conjugate side than to its short conjugate side.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chen (US 5,151,823) and Burger are both cited to show optical systems having magnifiers with diffractive surfaces and short and long conjugate sides, but do not teach or suggest the structure of the claims.
